Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/943,476

Applicant(s)

ZITLAW, CLIFF

Examiner

Woo H. Choi

Art Unit

2186

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 August 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 2/2/02
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

Art Unit: 2186

DETAILED ACTION

Claim Objections

1. Claim 8 objected to because of the following informalities:

The claim recites "wherein the" twice. One of them should be deleted.

2. Claim 18 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 18, claims the same subject matter as claims 12 and/or 13.

Appropriate action is required.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4 Claims 11, 14, 16 and 17 are provisionally rejected under the judicially created doctrine of double patenting over claims 16 and 17 of copending Application No. 09/943475. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows:

Claim 16 of the copending Application anticipates claims 11, 14 and 16 of the instant Application. Copending claim 17 anticipates the instant claim 17.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

5. Claims 1 – 21 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 - 20 of copending Application No. 09/943475 in view of Baltz.

6. Independent claims 1, 6, 19 and 20 of the copending Application claim all of the limitations of claims 1, 6, 19, and 20 of the instant Application with the following exceptions:

transferring of data during power-up without control from the processor, and
detecting power-up condition with a reset controller.

Art Unit: 2186

On the other hand, Baltz discloses a method of transferring data from a non-volatile memory to a volatile memory during power up without control from the processor (abstract). The reset signal is externally supplied in Baltz's invention (see col. 1, lines 25 – 29, figures 1A, 4A, 7, 8, reset 76).

It would have been obvious to one of ordinary skill in the art, having the teachings of Applicant's copending claims and Baltz before him at the time the invention was made, to use the bootstrapping from an external source teachings of Baltz's system in the copending invention of Applicant, in order to reduce internal memory requirements on a microprocessor chip in a processor with embedded memory.

7. As to the dependent claims, while not all of them are identical, different combinations of dependent and independent claims with varying degrees of details in the copending application encompass subject matters claimed in the instant application.

This is a provisional obviousness-type double patenting rejection.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Art Unit: 2186

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

9. Claims 1 – 3, 5, 11, 12, 15, 18 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Baltz (US Patent No. 6,058,474, hereinafter “Baltz”).

10. With respect to claims 1 and 21, Baltz discloses a processing system (figure 8) comprising:

a processor (10);
a volatile memory device (23 and 100) coupled to communicate with the processor; and
a non-volatile memory device (671) coupled to communicate with the processor and the volatile memory device, wherein the non-volatile memory device transfers data directly to the volatile memory device during power-up without control from the processor (col. 7, lines 46 – 60, see also abstract).

11. With respect to claim 2, the volatile memory device initiates the data transfer in response to a reset signal (abstract).

12. With respect to claim 3, the volatile memory device provides a system reset signal to the processor after the data is transferred from the non-volatile memory device (col. 7, lines 56 – 60).

Art Unit: 2186

13. With respect to claim 5, the volatile memory device initiates the data transfer in response to a reset signal provided by an external reset controller (figures 1A, 4A, 7, 8, reset signal 76 comes from an external source).

14. With respect to claim 11, Baltz discloses a processor system power-up method comprising:

detecting a power-up condition and providing a reset signal to a synchronous memory (abstract and col. 1, lines 25 – 29);

initiating a direct data transfer from a non-volatile memory to the synchronous memory in response to the reset signal (abstract); and

providing a system reset signal from the synchronous memory to a processor (col. 7, lines 56 – 60).

15. With respect to claims 12 and 18, the synchronous memory device is an SDRAM (col. 6, lines 7 – 8).

16. With respect to claim 15, the method further comprises loading the non-volatile memory with the processor prior to detecting the power-up condition (figure 8, 671, EPROM is loaded with a boot code prior to the power-up).

Art Unit: 2186

Claim Rejections - 35 USC § 103

17. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

18. Claims 4, 6 – 9, 14, 16 – 19, rejected under 35 U.S.C. 103(a) as being unpatentable over Baltz in view of Harari *et al.* (US Patent No. 6,266,724, hereinafter “Harari”).

Baltz discloses a method of improving a processor system power-up comprising:
detecting a power-up condition with a reset controller and providing a reset signal to an SDRAM;
using the SDRAM, initiating a direct data transfer from an EPROM memory to the SDRAM in response to the reset signal via a bus; and
providing a system reset signal from the SDRAM to a processor after the data has been transferred (see the rejections above).

However, Baltz does not specifically disclose the use of a flash memory for non-volatile memory coupled via a serial bus. On the other hand, Harari discloses a processor system that loads data from a flash memory (figure 7) via a serial bus (col. 7, Lines 34 – 36).

Art Unit: 2186

It would have been obvious to one of ordinary skill in the art, having the teachings of Baltz and Harari before him at the time the invention was made, to use the flash memory and decompression teachings of the computer system that loads data from a flash EPROM of Harari in the computer system that loads data from an EPROM of Baltz, in order to provide a removable PC card that can accommodate components offloaded from the host system to minimize the size and cost of the host system and to provide flexibility in system configuration (Harari, col. 3, 31 – 35).

19. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Baltz in view of Shin (US Patent No. 6,735,669).

Baltz discloses all of the limitations of the parent claim as discussed above. However, Baltz does not specifically disclose the use of a RDRAM. On the other hand Shin discloses that a RDRAM has various operational modes for low power system operation (Shin, col. 1, lines 16 – 20).

It would have been obvious to one of ordinary skill in the art, having the teachings of Baltz and Shin before him at the time the invention was made, to use the lower power consumption RDRAM teachings of Shin in the computer system of Baltz, in order to reduce the overall system power consumption. Reduce power consumption is especially important in battery operated portable computer systems.

Art Unit: 2186

20. Claims 10 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baltz in view of Harari as applied to claims 6 and 19 and further in view of Shin.

Baltz and Harati disclose all of the limitations of claims 6 and 19 as discussed above. However, Baltz and Harati do not specifically disclose the use of a RDRAM. On the other hand Shin discloses that a RDRAM has various operational modes for low power system operation (Shin, col. 1, lines 16 – 20).

It would have been obvious to one of ordinary skill in the art, having the teachings of Baltz, Harati and Shin before him at the time the invention was made, to use the lower power consumption RDRAM teachings of Shin in the computer system of Baltz and Harati, in order to reduce the overall system power consumption. Reduce power consumption is especially important in battery operated portable computer systems.

Conclusion

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Frank *et al.* (US Patent No. 6,546,489) disclose a computer system that transfers data from a non-volatile memory to a volatile memory and sends a control signal to the processor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Woo H. Choi whose telephone number is (703) 305-3845. The examiner can normally be reached on M-F, 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matt Kim can be reached on (703) 305-3821. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.
